

# Nighttime Dry

This fold gives you 16 layers of diaper right where the baby needs it for night time superabsorbency.

1. Stack two diapers. Fold the top diaper in half.

2. Fold the sides across the center panel to form a square pad.

3. Position the pad so that it will cover the major wetting area. Fold the sides of the bottom diaper across the center.

4. Fold a small portion up in the front.

5. Unfold the sides of the bottom diaper to form two wings.

6. Place the diaper in a wrap. Be sure that the diaper is entirely encased by the cover.
